15. Supplementary Notes Research performed in cooperation with the United State Department of Transportation and the Federal Highway Administration Research Study Title: Landscape Inventory and Management System for the Arizona Department of Transportation.					
16. Abstract <p>The application of computer based, spatial information technology (GIS) to the management of transportation facilities is becoming increasingly important. This project was for the development of spatially referenced system for management of roadside landscape and irrigation development in Arizona.</p> <p>Texas Transportation Institute. Environmental Management Program with ADOT's assistance completed the research activities associated with the identification of needs, an assessment of the Arizona Department of Transportation's computing environment, conceptual design of the management system, evaluation of hardware and software, the pilot demonstration and subsequent trial implementation activities.</p> <p>The research focused on the development of a "paperless" management system where the integration of technologies is the key to effective system consisted of the development of a spatially referenced mapping system for highway landscape and irrigation inventory, integration of intelligent maps into handheld data collection devices, collection of information into handheld devices and incorporation of these new technologies into existing data management systems.</p> <p>Upon completion of the trial implementation period the evaluations suggest that the system, because of its limited focus and high degree of complexity is probably not cost effective. This judgement is based on the fact that this system is a highly specialized system serving a very small segment of the overall maintenance mission of the Department. To be efficient and cost effective, a wider range of maintenance activities would have to be integrated into a single system framework. In the final analysis, the research successfully established a conceptual framework around which a new maintenance management system can evolve.</p>

INTRODUCTION TO THE PIMa SYSTEM

PIMa is a landscape inventory and management system designed for the Arizona Department of Transportation (ADOT). This is a new system designed to cycle information back into all parts of the management, maintenance and design processes. To accomplish this cycling of information there is an integration of many different types of hardware technology and software packages. Much of this integration required new programming efforts to provided simple, powerful and seamless operations.

ABOUT THIS MANUAL

You don't have to read every word of this manual to be able to use the PIMa system. We have organized the manual so you can quickly learn about the menu and options you will being using. Use the manual as a guide or reference handbook but it is not the only source were information can be found. PIMa combines seven different software packages: 1) Borland's dBase IV version 1.1, 2) E.S.R.I.'s Arc/3.4D, 3) Borland's C++ version 3.1, 4) GRiD's PenRight! Pro, 5) Traveling Software's Laplink, 6) DeluxePaint II or compatible paint package and 7) a modem transfer package PC Anywhere. Each of the software package have user's manual which can answer question which are beyond this manuals guidance.

Each chapter of this manual details on only one tool of the system. Each tool has it's own task or option from which to select. So in most cases, only one chapter of this manual is all you will use for your application.

CONVENTIONS OF THE MANUAL

Several elements in the manual's text are designed to make learning easier.

Boldface and Underline- These special typefaces indicate a Chapter

BOLDFACE AND CAPS- These special typefaces indicates a major topic

* Indicates an menu item that can be selected under this option

Boldface Indicates either a special word of interest or an entry form the keyboard

USING THE MOUSE

The mouse is required for two of the tools in the PIMa system. The graphical menuing system and the painting package for mapfile manipulations. Other than these two areas using the arrow keys is the standard procedure.

INFORMATION MANAGEMENT MENU (District & Roadside)

GENERAL OVERVIEW-

The PIMa system is a versatile and powerful management tool. The Information Management Menu provides you with detailed maintenance information about the vegetation and irrigation inventory along the highway roadside landscape. This package provides tools which let you create very detailed or large summary reports, view those reports graphically through the monitor screen or plotted display. The overall PIMa system is large and complex but the system provides simple menu driven accessing to greatly reduced its complexity.

The following figure is the a diagram of the information management menu used by District 1 and Roadside Development Services. All the menu options are the same for both menu but Roadside Development Services has a few different menu items available for the transferring of transaction and map files.

INFORMATION MANAGEMENT MENU

ANALYSIS	REPORTS	DATA FILES	TRANSFER	PRINT	EXIT
----------	---------	------------	----------	-------	------

ANALYSIS OPTION-

The analysis menu allows you to query or search database files to gather a subset of some information that meets some limiting criteria that you have set.

ANALYSIS	REPORTS	DATA FILES	TRANSFER	PRINT	EXIT
----------	---------	------------	----------	-------	------

Show Query File Create Query File Modify Query File Transfer Query File Delete Query File Delete Graphic File
--

* **Show Query Files-** allows you to select a previously created query file. Once this query is selected is executed and the information is displayed.

- 1) Select option from the menu by pressing **Enter**
- 2) A list is display of the current queries files available. Either use the up and down arrow keys to select the file or type the beginning letters of the file name to find, then

press **Enter** to view.

3) Once the query file has been viewed select **Alt-E** and **Exit** or **F-10, Exit & Exit**

*** Create Query File-** allows you to create a new query file.

- 1) Select option from the menu by pressing **Enter**
 - 2) The first selection is a list of the database files available to query. Select the **.dbf** to query and press **Enter**
 - 3) The second selection is to name the new query file for later reference.
 - 4) The next screen allows you to create the new query files.
- Note: Chapter : Using Queries to Search Databases

*** Modify Query File-** allows you to modify/change the previous criteria used for the query.

- 1) Select option from the menu by pressing **Enter**
 - 2) Select query file (.QBE) to modify and press **Enter**
 - 3) The next screen allows you to modify the query file
- Note: Chapter : Databases reference material to learn about Query setups

*** Transfer Query File-** allows you to transfer a previously created query file (.QBE) to the graphic display module in Arc/3.4D.

- 1) Select option from the menu by pressing **Enter**
- 2) The first selection is a list of the directories and query files (.QBE) files to select. Usual selection is a .QBE file from this menu. Search the list for transfer files and select by pressing **Enter**
- 3) The second option allows you to enter a new name for the transferred .QBE and then allow you to give a description to the file. Enter New Name of file and press **Enter**, then provide a description to the file and press **Enter**

*** Delete Query File-** allows you to delete a previously created query file.

- 1) Select option from the menu by pressing **Enter**
- 2) Select query file (.QBE) to delete and press **Enter**

*** Delete Graphic File-** allows you to delete a database file (.DBF) from the Graphic Module (Arc.3.4D)

- 1) Select option from menu by pressing **Enter**
- 2) Select database file (.DBF) to delete and press **Enter**

REPORTS OPTION-

The report design option enables you to create reports simply by placing database fields on-screen. You can then add summary fields, test, boxes, and lines to make the report more informative and readable.

ANALYSIS	REPORTS	DATA FILES	TRANSFER	PRINT	EXIT
	Create Database Modify Database View Database Print Database Create Query Modify Query View Query Print Query				

- * **Create Database Report-** allows you to create a report from a database file (.DBF) (1) Select option from menu by pressing **Enter**
 - 2) The first option is to select which database file will be used for the report and press **Enter**
 - 3) The second option is to enter the new name for the report and press **Enter**
 - 4) The final screen is the report design screen used to create the new report
 - 5) Once finished creating report exit **ALT-E** and save **S** or abandon **A** the reportNote:
- * **Modify Database Report-** allows you to modify a previously formed report that uses a database file (.DBF)
 - 1) Select option from menu by pressing **Enter**
 - 2) The first option is to select which database file (.DBF) that will be modified and press **Enter**
 - 3) The second option is to select the form (.FRM) to use with this database file and press **Enter**
 - 4) The final screen is the report design screen to be modified
 - 5) Once finished modifying report exit **ALT-E** and save **S** or abandon **A** the reportNote:

- * **View Database Report-** allows you to view any previously created database report
Note: A Report form **must** already have been created for the selected database to use this option
 - 1) Select option from menu by pressing **Enter**
 - 2) The first option is to select which database file (.DBF) that will be viewed and press **Enter**
 - 3) Select form to use with this database report form for viewing and press **Enter**
 - 4) Use **Ctrl-S** to Stop and Start the screen when viewing a database file (.DBF)
- * **Print Database Report-** allows you to print a database report
Note: the report form **must** already have been created for the selected database to use this option
 - 1) Select option from menu by pressing **Enter**
 - 2) The first option is to select which database file (.DBF) to print
 - 3) Select the form (.FRG) to use for printing
- * **Create Query Report-** allows you to create a report from a query file (.QBE)
 - 1) Select option from menu by pressing **Enter**
 - 2) The first option is to select which query file will be used for the report and press **Enter**
 - 3) The second option is to enter the new name for the report and press **Enter**
 - 4) The final screen is the report design screen used to create the new report
 - 5) Once finished creating report exit **ALT-E** and save **S** or abandon **A** the reportNote:
- * **Modify Query Report-** allows you to modify a previously formed report that uses a query file (.QBE)
 - 1) Select option from menu by pressing **Enter**
 - 2) The first option is to select which query file (.DBF) that will be modified and press **Enter**
 - 3) The second option is to select the form (.FRM) to use with this query file and press **Enter**
 - 4) The final screen is the report design screen to be modified
 - 5) Once finished modifying report exit **ALT-E** and save **S** or abandon **A** the reportNote:
- * **View Query Report-** allows you to view any previously created query report
Note: A Report form **must** already have been created for the selected query to use this option
 - 1) Select option from menu by pressing **Enter**
 - 2) The first option is to select which query file (.QBE) that will be viewed and press **Enter**
 - 3) Select form to use with this query report form for viewing and press **Enter**
 - 4) Use **Ctrl-S** to Stop and Start the screen when viewing a queryfile (.QBE)

*** Print Query Report-** allows you to print a query report

Note: the report form **must** already have been created for the selected query to use this option

- 1) Select option from menu by pressing **Enter**
- 2) The first option is to select which query file (.QBE) to print
- 3) Select the form (.FRG) to use for printing

DATA FILES OPTION-

The data files option permits you to view one of the selected databases on the screen. This option however doesn't allow you to edit or create any new data.

- 1) Select option from menu by pressing **Enter**
- 2) The final screen displays the database information; press **ESC** then **Ignore** to return to menu

ANALYSIS	REPORTS	DATA FILES	TRANSFER	PRINT	EXIT
		Vegetation Veg. Dict. Irrig. App. Irrig. Line Surface Soil Dict. Transaction Activities			

- * **Vegetation Database-** allows you to view the vegetation database which contains information plant quantities, location, species, date planted and face slope
- * **Vegetation Dictionary Database-** allows you to view a dictionary database about the numerous plant species located along the highway
- * **Irrigation Appliance Database-** allows you to view the irrigation appliance database which contains information about the irrigation appliance type, quantities, location, size and other misc. information particular to that appliance
- * **Irrigation Line Database-** allows you to view irrigation line data which usually only provides locational information

- * **Surface Database-** allows you to view surface data which contains information about location and type of material on the surface
- * **Soil Dictionary Database-** (very limited dictionary) allows you to view a dictionary database about numerous soils along the highway and their characteristics
- * **Transaction Databases-** allows you to view transaction information which contains date of transaction, activity number, quantities, etc. about each transaction occurring along the highway
- * **Activities Database-**

TRANSFER OPTION-

The transfer option allows you to transfer and append files between directories and computers.

ANALYSIS	REPORTS	DATA FILES	TRANSFER	PRINT	EXIT
			Transaction File Map File Append Transaction File Transfer to Graphics		

- * **Transaction Files-** allows you to transfer transaction files from the district office to roadside development services office.
 - 1) Select option from menu by pressing **Enter**
- * **Map Files-** allows you to transfer map files from the district office to roadside development services.
 - 1) Select option from menu by pressing **Enter**
- * **Append Transaction Files-** allows you to append the org transaction files up to the district or roadside transaction file
- * **Transfer to Graphic-** allows you to transfer out to the graphics module (Arc/3.4D)
 - 1) Select option from menu by pressing **Enter**

PRINT OPTION-

The print option allows you to print either single database files or query files which can be simple single database query or complex multiple database query.

ANALYSIS	REPORTS	DATA FILES	TRANSFER	PRINT	EXIT
				Database File	
				Query Report	

- * **Database File-** allow you to print an entire database file (.DBF). Note: Some database files can be several pages in length and will require a extended period for printing.
- * **Query Report-** allows you to print an previously performed query file (.QBE). Note: Some query files can be several pages in length and will require a extended period for printing.

EXIT

Create New Work Report

* **Create New Work Report**- allows you to create/schedule new daily work activities for one crew. If you have more than one crew each will have to be schedule separately. You should schedule all work activities for this one crew before exiting. If you exit first then return to schedule more activities for the same crew you will lose previously schedule work activities for that crew.

1) Select option from menu by pressing Enter

2) Enter the date for the new Crew Work Report. example "January 1, 1993" = **01/01/93**

3) Select from the pop-up menu the crew number. Note: Each GRiDPAD is assigned to one crew.

Note: The GRiDPAD should always be assigned to the same crew unless the pad has failed.

CREW WORK REPORT- allows you to schedule daily work activities for a crew. Multiple activities can be schedule once you have entered the Org Report Menu by selecting the Exit Option and Next Work Activity.

Crew No. 01, Report # 1 **W o r k R e p o r t M e n u**

Program: Activity: Suffix: Job No: Date:

Activity Description:

Org: Route: Letter: Begin MP: End MP: Dir: Road:

Comments:

-----LABOR-----EQUIPMENT-----

Emp No.	RT	OT	CT	TRF	TRV	TRN	Unit	Hrs	Start	End
---------	----	----	----	-----	-----	-----	------	-----	-------	-----

Exit

* **Crew No. & Report No.-** these two fields keep you informed to which Crew Number and Report Number you are scheduling. Example: Crew No. 2 Report No. 3 This report is for crew # 2 and it is the 3rd work activity for that particular day.

WORK ACTIVITY MENU- the first menu of the Org Work Report is designed to allow simple scheduling of the defined work activities. Most entries are chosen through pop-up selection. Once you place the cursor over the field entry boxes the pop-up menu will appear.

Note: To move from field entry box to field entry box use the

LEFT ARROW and RIGHT ARROW KEYS.

To make selections from pop-up menus use the **UP ARROW and DOWN ARROW KEYS** or type in the **FIRST LETTER or FIRST NUMBER** which you want to chose

Field Entry Boxes:

* **Program:** allows you to enter the program number for this activity

- 1) Move cursor to **Program:**
- 2) Use **arrow keys** to select program number and press **Enter**

* **Activity: & Activity Description:** allows you to select the activity number and description for this activity

- 1) Move cursor to **Activity:**
 - 2) Use **arrow keys** to select the major topic for the activity and press **Enter**
 - 3) Use **arrow keys** to select activity number and activity description and press **Enter** Note: the activity description field box is automatically completed
- Note: Press **Esc** if you want to reselect from the major topic pop-up

* **Suffix:** allows you to select the suffix letter for the activity chosen

- 1) Move cursor to **Suffix:**
- 2) Use **arrows keys** or **enter the letter** to select suffix letter and press **Enter**

* **Job No:** allows you to select the job number for this work activity

- 1) Move cursor to **Job No:**
- 2) Use **arrow keys** or **enter the letter/number** to select the job number and press **Enter**

* **Date:** the date field is automatically entered from the first entry after selecting **Create New Work Report**. Note: This field cannot be changed unless you exit and begin again.

* **Org:** allows you to select the org number

- 1) Move cursor to **Org:**
- 2) Use **arrow keys** or **enter the letter/number** to select org number and press **Enter**

* **Route: & Letter:** allows you to select the route and it's corresponding letter together. After a particular highway is select the letter of the highway is stored in the letter field box and the

highway number is stored in the route field box.

- 1) Move cursor to **Route**:
- 2) Use **arrow keys** or **enter the letter/number** of highway to select and press **Enter**

* **Begin MP**: allows you to enter the starting milepost for this activity. This field plays an important role when the map forms have to be viewed. This field must be entered to goto the map forms. The value stored in this field entry box determines the starting map that will be displayed when the map forms are opened.

- 1) Move cursor to **Begin MP**:
- 2) Press **Enter** Note: The cursor now is available to accept numeric entry.
- 3) Enter the mile and tenth milepost to begin this activity. Example **149.2** or **12.3** or **1.2** Note: You must enter the decimal place for the tenth mile designation.
- 4) If beginning milepost less than 5 character you must press **Enter**

* **End MP**: allows you to enter the ending milepost for this activity.

- 1) Move cursor to **End MP**:
- 2) Press **Enter** Note: The cursor now is available to accept numeric entry.
- 3) Enter the mile and tenth milepost to begin this activity. Example **149.2** or **12.3** or **1.2** Note: You must enter the decimal place for the tenth mile designation.
- 4) If ending milepost less than 5 character you must press **Enter**

* **Dir**: allows you to select which side of the highway this activity should be performed. The options for this field are limited to North, South, East, West and Both

- 1) Move cursor to **Dir**:
- 2) Use **arrow keys** or **enter the letter/number** of direction to select and press **Enter**

* **Road**: allows you to select which area for this work activity should be performed within. The options for this field are limited to Frontage, Crossroad, Ramp, and Both

- 1) Move cursor to **Road**:
- 2) Use **arrow keys** or **enter the letter/number** of road area to select and press **Enter**

* **Comments**: allows you to enter a message for the crew relating to this activity. This field is optional and has a field width of 60 characters.

- 1) Move cursor to **Comments**:
- 2) Press **Enter** and type in the comments needed for this activity
- 3) Press **Enter** when completed

LABOR MENU- this menu of the Org Work Report also is designed to allow simple scheduling of the labor needed for the work activities. All entries are chosen through pop-up selection. Once you place the cursor over the field entry box the pop-up menu will appear.

Field Entry Boxes

* **Emp. No.:** allows you to enter an employees code for this activity. This is the only field box available for entry at this time. You can enter up to 10 employees for any one activity.

- 1) Move cursor to **Emp. No:**
- 2) Press **Enter**
- 3) Use **arrow keys** or enter the first initial/s of employee to select and press **Enter**
- 4) Continue with step # 3 until all employees are entered for this activity
- 5) Use **arrow keys** or enter the letter "X" to select "Xit" and press **Enter**

* **RT-** this field entry box is not active in this menu system

* **OT-** this field entry box is not active in this menu system

* **CT-** this field entry box is not active in this menu system

* **TRF-** this field entry box is not active in this menu system³

* **TRV-** this field entry box is not active in this menu system

* **TRN-** this field entry box is not active in this menu system

EQUIPMENT MENU- this menu of the Org Work Report also is designed to allow simple scheduling of the equipment needed for the work activities. All entries are chosen through pop-up selection. Once you place the cursor over the field entry box the pop-up menu will appear.

Field Entry Boxes

* **Unit:** allows you to enter the equipment unit number and description. This is the only field entry box available for entry at this time. You can enter up to 10 pieces of equipment for any one activity.

- 1) Move cursor to **Unit:**
- 2) Press **Enter**
- 3) Use **arrow keys** or enter the first letter/number of the equipment to select and press **Enter**
- 4) Continue with step # 3 until all pieces of equipment are entered for this activity
- 5) Use **arrow keys** or enter the letter "X" to select "Xit" and press **Enter**

* **Hrs-** this field entry box is not active in this menu system

* **Start-** this field entry box is not active in this menu system

* **End-** this field entry box is not active in this menu system

EXIT MENU- this menu of the Org Work Report is designed to allow you to choose an exiting option. Each option perform completely different tasks so make sure of your selection.

*** Exit:** allows you to select one of three options for exiting the crew work report menu.

- 1) Move cursor to Exit:
- 2) Use arrow keys to select option and press Enter

*** Save Report & Next Report-** saves the current daily work activity report and creates the next daily work report for the same crew. Each report is sequentially numbered beginning at the number 1. Note: If you select to exit the report you cannot add any new daily work activity reports without erasing all previously saved daily reports for that crew.

- 1) Move cursor to Save Report & Next Report
- 2) Press Enter

*** Save Report & Next Crew/Exit-** saves the current daily work activity report and exits the work report menu returns back to ORG MAIN MENU Note: If you select this option any new reports cannot be added without erasing all previously saved daily reports for that crew.

- 1) Move cursor to Save Report & Next Crew/Exit
- 2) Press Enter

*** Do Not Save & Exit-** allows you to erase that crews entire daily work reports. Once this option is selected a crews work reports cannot be recovered and will have to be redone.

- 1) Move cursor to Do Not Save & Exit
- 2) Press Enter

TRANSFER:GRiDPAD OPTION

REPORTS	TRANSFER	MODIFY_LIST	EXIT
	Transfer Out Transfer In Delete GRiDPAD Files		

GRiDPAD Setup- Before setup, both the GRiDPAD and your computer should have the program LAPLINK installed and operational.

- 1) Plug LAPLINK Cable into both GRiDPAD tablet, 9-pin serial port (male port), and Org Computer, 9-pin serial port (male port).
- 2) Turn GRiDPAD tablet ON using power switch
- 3) Select second option Transfer files from external computer and press OK

Note: This puts the computer in the transfer mode. To verify look at the top menu on the right side bottom for the phrase: Server computer ready

* **Transfer Out**- allows you to transfer both crew daily work reports and _list information out to the GRiDPAD. Note: List information is discussed later in the Modify_List option.

1) Select option from menu and press Enter

PIMa TRANSFER MENU- is the menu used to transfer both crew daily work reports and list information out to the GRiDPAD. To be able to transfer the necessary information out (download) to the GRiDPAD you must have the GRiDPAD in the transfer mode.

P I M a T R A N S F E R M E N U	
	New Entry Current Status
Transfer:	Transfer Out
Date:	
Crew No.:	
Execute:	
Exit:	

* **New Entry**- allows you to view the current entry being placed within the current status column

* **Current Status**- shows the current values entered into each row

* **Status Line**- displays the message "Use Left & Right Arrows to Move Up & Down Menu"

Note: The Up & Down Arrow Key only work on pop-up menu list

* **Message**- Provides a general explanation for each data entry field that is selected

Field Entry Boxes

* **Transfer**: This field is automatically filled by the program, but it tells you which type of transfer you are using.

* **Date**: This field allows you to enter the date of the activity you want to transfer to the GRiDPAD

1) Select option from menu and press Enter

2) Enter date of activity and press Enter Example: "05/30/93" The date must be enter with the month first, day second and year third. Also included in the date field is the "/" lines. Note: Date will automatically enter once it is completed.

* **Crew No.**: This field allows you to enter the Crew No./Device which this work report was planned.

1) Select option from menu and press Enter

2) Select Crew No. from the pop-up menu or input number from keyboard and press **Enter**.
Example: To enter crew no. five type "0" then "5", "05", for crew #5

* **Execute:** Once all the previous fields are completed and GRiDPAD is setup for transfer, select **Enter** Note: If you want to transfer out an entire weeks of planned reports, you will just need to change the date then select execute. If you want to change to a different crew change the Crew No. and setup next GRiDPAD

1) Select option from menu and press **Enter**

* **Exit:** Once you have transferred out all the daily work reports select this option to return to the Org Main Menu

1) Select option from menu and press **Enter**

* **Transfer In-** This option allows you to transfer information from the GRiDPAD back in from the field.

1) Select option from menu and press **Enter**

PIMa TRANSFER IN MENU- is used to transfer crew daily work reports in from the GRiDPAD. Note: To be able to transfer the necessary information in (upload) from the GRiDPAD you must have the GRiDPAD in the transfer mode. See GRiDPAD setup.

* **Status Line-** displays the message "Use Left & Right Arrows to Move Up & Down Menu"

Note: The Up & Down Arrow Key only work on pop-up menu list

* **Message-** Provide an general explanation for each data entry field that is selected

Field Entry Boxes

*** Transfer:** This field is automatically filled by the program, but it tells you which type of transfer you are using.

*** Date:** allows you to enter today's date for PeCoSII Note: This is a required field for the transfer in operation to process the crew daily report.

1) Select option from menu and press Enter

2) Enter today's date and press Enter Example: "05/30/93" The date must be enter with the month first, day second and year third. Also included in the date field is the "/" lines. Note: Date will automatically enter once it is completed.

*** Date:** This field allows you to enter the date of the activity you want to transfer in from the GRiDPAD

1) Select option from menu and press Enter

2) Enter date of activity and press Enter Example: "05/30/93" The date must be enter with the month first, day second and year third. Also included in the date field is the "/" lines. Note: Date will automatically enter once it is completed.

*** Crew No.:** This field allows you to enter the Crew No./Device which this work report will comes from.

1) Select option from menu and press Enter

2) Select Crew No. from the pop-up menu or input number from keyboard and press Enter. Example: To enter crew no. five type "0" then "5", "05", for crew #5

*** Initials:** This field requires you to enter your initials for PeCoSII.

*** Execute:** Once all the previous fields are completed and GRiDPAD is setup for transfer, select Enter. After you have selected enter the Execute command will provide a print out of each daily work report for the day selected. Note: If you want to transfer in an entire day of planned reports, you will just need to change the crew number and Gridpad then select execute. You are allowed only to transfer in one day's worth of work report, then you must exit and return to transfer another day worth of activities.

1) Select option from menu and press Enter

*** Exit:** Once you have transferred out all the daily work reports select this option to return to the Org Main Menu

1) Select option from menu and press Enter

Delete GRiDPAD Files- This option allows you to delete all previously completed work activity files on the GRiDPAD. Note: Use this option after you have transferred in all completed work activities

MODIFY _LIST'S OPTION-

This option allows you to add, delete, change or view any item from a _LIST database file

REPORTS	TRANSFER	MODIFY_LIST	EXIT
---------	----------	-------------	------

? What are _LIST database files- these files were create to be use with all the pop-up menus used for entry of data. These data entry fields are located in create of work reports, hand held data collection device (GRiDPAD), etc.. These files are transferred into the GRiDPAD during the transfer in process. Note: If you modify any of the _LIST files you must follow the exact format spacing within the file are the _LIST files will not function properly on the GRiDPAD.

WARNING!!!- When you modify any of the _LIST files you cannot leave any bank entry fields are information will not display in the pop-up list

Current _LIST to select from:

ACT_LIST- file for all work activities. Each field contains first the Activity Number followed by the Activity description. The current field names are as follows: TR_ACT- Tree Activities, SH_ACT- Shrub Activities, IR_ACT- Irrigation Activities, HE_ACT- Herbicide Activities, SU_ACT- Surface Activities, OT_ACT- Other Activities, and SI_ACT- Six Hundred Level Activities

APP_LIST- file for all irrigation appliances model numbers. This file is used by the irrigation maps on the GRiDPAD. The current field names are as follows: ARC- Antenna/Radio Controller, BS- Booster Station, BP- Back Flow Preventer, FI- Fertilizer Injector, FC-Field Controller, FU- Filter Unit, FS- Flow Sensor, GV- Gate Valve, PPS- Popup Sprinkler, PRR- Pressure Reduction Riser, QC- Quick Coupler, RC- Remote Control Valve, WM- Water Meter

EMP_LIST- file for Org Employee Numbers. The current field name is as follows: EMP_NO- Employee Number

EQP_LIST- file for Org Equipment List. Each field contains first the Equipment Number followed by the equipment description. The current field name is as follows: EQUIP_DES- Equipment No. and Description

GRM_LIST- file for Ground Treatment materials such as granite mulch, rock mulch, etc. The current field names are as follows: TYPE- Idcode given to the materials and NAME- the entire name for the material

IRR_LIST- file for all irrigation appliances. This file is used by the irrigation maps on the GRiDPAD and should never be changed. The current field names are as

follows: ARC- Antenna/Radio Controller, BS- Booster Station, BP- Back Flow Preventer, FI- Fertilizer Injector, FC-Field Controller, FU- Filter Unit, FS- Flow Sensor, GV- Gate Valve, PPS- Popup Sprinkler, PRR- Pressure Reduction Riser, QC- Quick Coupler, RC- Remote Control Valve, WM- Water Meter

MAP_LIST- file used for map files on GRiDPAD. The current field names are as follows: **REMO_LIST**- Removal list for vegetation, **REPL_LIST**- Size of replacement for vegetation,

MAT_LIST- file used for material list and contains the description, inventory number and unit of measurement. The current field names are as follows: **FE_MAT**- Fertilizing materials, **TR_MAT**- Tree materials, **SH_MAT**- Shrub Materials, **IR_MAT**- Irrigation Materials, **ER_MAT**- Erosion Control Materials, **HE_MAT**- Herbicide Materials, **CH_MAT**- Chemical Materials, **OT_MAT**- Other materials Note: It is critical this file follow an exact format of the field when replacing with a new material.

MOD_LIST- currently this file is not actively used with any programs

SEB_LIST- this file is used in the GRiDPAD when a shrub is selected in a shrub map file. The current field names are as follows: **PLANT_ID**- Identification code for a shrub usually by first two letter of the genus and species, **COM_NAME**- Common name of the plant for easy identification in the field

SUF_LIST- this list is used for the suffix letters popup menu. The only field name is **SUFFIX**- Input letters A-Z as needed

TRE_LIST- this file is used in the GRiDPAD when a shrub is selected in a tree map file. The current field names are as follows: **PLANT_ID**- Identification code for a shrub usually by first two letter of the genus and species, **COM_NAME**- Common name of the plant for easy identification in the field

WRK_LIST- file used for setting up most of the daily work plan. The current field names are as follows: **PROGRAM**- Stores Program No.'s, **ACT_DES**- Store the basic activities descriptions, **JOB_NO**- Stores Job No. Id's, **ORG**- Org Numbers, **HIGH_ID**- Highway identification numbers, **DIRECTION**- Stores direction descriptions, **CLASS**- Class identification code

DATABASE/STRUCTURE MODIFICATION MENU

*** Select File Option**- allows you to select the _list file to be modified. Once the file is selected the file name will appear at the middle left of the screen. At any time you would like to change the file come back to this option and pick from the menu the next file.

1) Select file from menu and press Enter

Edit Field Structure Option- currently this option is not available. If a field name needs to be created or deleted this should be done within the dBase IV program. Note: If you are not familiar with the dBase IV program, call the Information Services Group at (602) 255-8714.

* **Create New Field Name-** not available at this time.

* **Delete Field Name-** not available at this time

WARNING- Programs working in GRIDPAD are currently setup to accept

Edit Info. Structure Option- allow you to view, add or delete any data from a _list file.

WARNING!!!- When you modify any of the _LIST files you cannot leave any blank entry fields are information will not display in the popup list.

* **View Data in File-** this option allows you to only view data located within a _list file.

1) Select option from menu and press Enter

2) Use TAB to move forward between fields and Shift Tab to backwards. Use UP and Down Arrow Keys to move information blocks.

* **Add Data to File-** this option allows you to add data located within a _list file.

1) Select option from menu and press Enter

2) Use TAB to move forward between fields and Shift Tab to backwards. Use UP and Down Arrow Keys to move information blocks.

3) Either move to the end of the field that the information needs to be added or replace an information block that is no longer needed

4) Type in the new information

5) Once finished, exit the program by selecting Exit with the Alt-E and Exit

WARNING!!!- When you modify any of the _LIST files you cannot leave any blank entry fields are information will not display in the popup list.

* **Delete Data From File-** this option allows you to delete data from a _list file.

1) Select option from menu and press Enter

2) Use TAB to move forward between fields and Shift Tab to backwards. Use UP and Down Arrow Keys to move information blocks.

3) Move to the information block that needs to be deleted and mark the record for deletion by selecting the keys Alt-R and then select the option Mark record for deletion Note: To tell whether a record is marked a Del will appear at the bottom righthand of the screen.

4) Continue the above procedure until all the records you need to delete are marked.

5) Once all records are marked you will need to erase the marked records by selecting Alt-U and then selecting the option Erase Marked Records

WARNING!!!- When you modify any of the _LIST files you cannot leave any blank entry fields are information will not display in the popup list.

Return/Exit Option- this option returns you to PIMa's ORG MAIN MENU

1) Select option from menu and press Enter

EXIT OPTION- this option allows you to return to back to the Main Menu

1) Select option from menu and press Enter

REPORTS	TRANSFER	MODIFY_LIST	EXIT
---------	----------	-------------	------

EDITING MAP FILES- this option allows you to view, edit or remove a map file. These files can either be updated for the GRiDPAD or made suitable for reviewing at later dates. Note: The DeluxePaintII Enhanced paint package has to be install on your computer before you can edit or view your .pcx files. There is not a selection from the PIMa menu to start this program but it can be started "C:>" by typing DP

*** General Overview-** To become familiar with DeluxePaintII you should read the first two chapters and do the tutorial package located within the DeluxePaintII manual. The paint package is a very rudimentary package, but should handle any of the jobs necessary for PIMa on the 8086 GRiDPAD. The .pcx map files which have been written upon by field maintenance personnel are located in the C:\DPaint\MAPFILES directory.

dBASE IV REFERENCE MATERIAL

General Notes- the following information is by no means all the procedures available for database, dBase will allow you to perform almost any type of query or manipulation of data that you will need. A excellent reference book for dBaseIV is: Using dBaseIV, Covers Version 1.1, Written by Que Corporation. The following reference material can be found between pages 299 and 346.

All examples usually utilize the transaction file.

QUERIES IN dBASE

To query(search) a database the following steps must be followed:

- 1) Open dBaseIV
- 2) Select the database file to open
- 3) Move to Queries option and select Enter

Searching the Database

1) **Character Fields-** To query a charter fields use " " quotation marks within the search field.

Examples:

ID	OR	IDCODE	OR	ACT_NO
"SOSE"		"147.3S03"		"322"

2) **Numeric Fields-** To query a numeric fields just place search value into search field.

Examples:

QUANTITY	OR	QUANTITY
=10		>=10 (greater than or equal to)

3) **Date Fields-** To query a date field it requires you to enclose the field in braces { }.

Examples:

DATE	OR	DATE
>{01/03/93} (greater than)		<{01/30/93} (less than)

4) Relational Operators

Examples:

> Greater Than
< Less Than
= Equal To
<> or #, Not Equal to a Specific Value
>= Greater Than and Equal To
<= Less Than and Equal To
\$ Included within the Field
LIKE Pattern Match used in Wildcard Searches

5) Searching with WildCards- Wildcards are used to find data that matches a template which you have prescribed.

LIKE or like- is used form searching character fields with either ? or *

?- questions marks located within a query mean any character in just this one position.

Examples:

IDCODE	OR	ACT_NO
LIKE "14?.?S??"		LIKE "32?"
Result: all shrubs in mile 140		Result: all 320 activities

*- asterisk are used within a query to mean all characters in all positions following the asterisk

Examples:

IDCODE	OR	IDCODE
LIKE "142.*"		LIKE "142.3T*"
Result: all inventory in mile 142		Result: all trees in tenth mile 142.3

6) Values in a Range- Searching for values in a range is looking for records falling between to values. A comma is needed to separate

Examples:

QUANTITY	DATE
>10,<20	>{05/30/93},<{06/30/93}
Result: Quantities between 11 and 19	Result: All records between 05/31/93 and 06/29/93

7) **Records meeting Multiple Conditions-** Searching for records meeting multiple conditions: combining search conditions enables you to continue refining you database searches.

Example:

IDCODE	ID	ACT_NO	DATE
LIKE "142.3IA*"	"PRR"	"333"	>=(06/01/93),<=(07/01/94)

Result: Identifies all pressure reduction risers which have been replace in tenth mile 142.3 between June 1, 1993 and July 1, 1994.

8) Multiple Values in the Same Field-

ID	OR	ID
"PRR"		"LAMO"
"RCV"		"WAFI"
Result: selects only pressure reducers and remote control valves		Results: selects both Lantana and Washingtonia fileria

9) **OR and AND Queries-** The first line of the query search is treated as the AND condition and the second line is the OR condition.

ID	REASON
"WAFI"	"FREEZE"
"WAFI"	"IRRIGATION"

Result: Finds all the Washingtonia fileria remove because of freeze or irrigation failure.

OR SEARCHES ONLY

ID	REASON	QUAN	ACT_NO
"WAFI"	"FREEZE"		
	"FREEZE"	>20	"324", "315"

Results: All Washingtonia removed due to freeze or any tree or shrub planting with removal greater than 20

10) **Summarizing Values in the Query-** Summarizing values in the query is used to know information about the total of these records.

Summary Operators:

SUM- Adds all records ant return the totals

AVG- Adds all records then divides by the total number of records to return an average for that field.

MIN- Returns the smallest value in that field

MAX- Returns the largest value in that field

CNT- Counts the number of records in that field

Example:

ID	REASON	QUANTITY	DATE
"LAMO"	"FREEZE"	SUM	>={01/01/93}, <={12/31/94}

Result: Total number of lantana killed due to freeze between 1993 and 1994

11) Grouping Records for Summary

Example:

ID	REASON	QUANTITY	DATE
GROUP BY	"FREEZE"	SUM	>={08/01/92}, <={08/01/93}

Result: List all trees and shrubs killed due to freeze between 08/92 and 08/93 with totals

12) Relational Database Queries- Relational database queries relates two or more database files to each other, enabling the user to draw information from all files based on relationship between fields.

Select from the PIMa menu the Create Query option from ANALYSIS option. Select the database file and name.

1. To add a file to this query select the Layout option from the menu using ALT-L then select the option Add file to query
2. To link databases together use the option Create link by pointing again with the Layout option with ALT-L.

REPORT GENERATION IN dBASE

Two options for report generation are:

- 1) Use Quick Report- this option prints out a report of the selected database file by pressing the Shift-F9 keys
- 2) Using the Report Design Screen

Using and Explanations of the Report Design Screen

- 1) **The Bands Within the Screen**

<u>Band</u>	<u>Description</u>
-------------	--------------------

Page Header	Contains fields and text that print at the top of each page
-------------	---

Report Intro	Print only on the first page of the report
--------------	--

Detail	Prints once for each record in the database
--------	---

Report Summary	Prints at the end of the report after the last record is printed in the detail band
----------------	---

Page Footer	Prints at the bottom of each page of the report
-------------	---

2) Using Quick Layouts to Create a Default Report

Choose Quick layouts from the Layout Menu ALT-L: then select whether it is to be a column or form

Column Layout- if you want your report to have a column for each database field

Example:	IDCODE	ID	DESCRIPTION
	XXXXXXXXXX	XXXX	XXXXXXXXXXXX

Form Layout- if you want the report to print each database field on a separate line.

Example:	IDCODE	XXXXXXXXXXXX
	ID	XXXX
	DESCRIP	XXXXXXXXXXXX

3) Testing the Report- Choose the print menu with ALT-P: then select View report on screen

4) Adding Fields to the Bands- Choose the field menu from the menu bar with ALT-P: the select Add field

5) Moving Fields on the Band

Within a Band-

1. Position the cursor on the field you want to move and press F6 (Select); the press Enter
2. Press F7 (Move). Using arrow keys position on the band where you want to move the field
3. After you move the field to this new position and press Enter

From One Band to Another Band-

1. Position the cursor on the field you want to move and press F6 (Select); the press Enter
2. Use arrow keys move cursor to the band into which you want to move the field
3. Press F7 (Move). Using arrow keys position on the band where you want to move the field
4. After you move the field to its new position and press Enter

6) Deleting Field from the Band

1. Simply place the cursor on the field and press DELETE

7) Changing A Field's Size

1. Move the cursor to the field you want to change and press Shift-F7(Size). Press arrow key to make field larger or smaller. Press enter to accept the new size. Press Esc if you decide not to resize.

8) Printing the Reports

1. Select the option print menu with ALT-P
2. Select Print this report

CREW WORK REPORT FORM:

The various fields that are found in the crew work report form and their uses are given below:

- * **Program** : This field pops up the various program numbers that are used by the crew. This is a character field of width 4.
- * **Activity** : This field pops up the activity list which gives the various activities supported by the ORG. This field is also responsible for the value that will be entered in the **Activity Description** field. Once an activity is chosen from the activity list, the activity description list pops up with all the different activities supported for that activity. After a selection is made the activity number corresponding to the activity chosen is entered into the **Activity** field. This field is a character field of width 4. The activity description of the selected activity is stored in the **Activity Description** field. This field is not accessible to the user directly and it is a character field of width 40.
- * **Suffix** : This field pops up the list of suffixes from A to Z for the activity. This is a character field of width 1.
- * **Job Number** : This field pops up the list of job numbers present in the ORG. This field is a character field of width 10.
- * **Date** : This field gives the current date of the system. The date is generated through the computer. If the date is incorrect the internal date within the computer must be changed. To change date: At DOS prompt A:>, type date and enter new date as soon above. This field is inaccessible to the user.
- * **Org** : This field gives the ORG number. When selected it pops up a list containing the various ORG number's in the district 1 land maintenance. This is a character field of width 4. This is a required field.
- * **Route & Letter** : These two fields are used together. Selecting either of the fields pops up a list of highways under a particular ORG. After a particular highway is selected the letter of the highway is stored in **LETTER** field and the number of the highway is stored in the **ROUTE** field. Example : If the highway is S360 SUPERSTITION, S is stored in the **LETTER** field and 360 is stored in the **ROUTE** field.
- * **Beginning Mile** : This field gives the starting mile post for the day. This is an optional field which the user could enter. This field also plays an important role when the map forms have to be viewed. This field has to be entered to go to the map forms. The value stored in this field determines the starting map that has to be displayed when the map forms are opened. A pop up calculator pad pops up when this field is selected. This is a numeric field of width 4.

* **Ending Mile** : This field gives the ending mile post for the activity. This is also an optional field which the user could enter. A pop up keyboard pops up when this field is selected. This is a numeric field of width 4.

* **Direction** : This field gives the direction of work for the activity. This is an optional field which could be used. When this field is selected a list showing the four directions and an extra option called Both is popped up. The starting letter of these options is stored in the field. This field is a character field of width 1.

* **F, R, C** : This field specifies the part of the highway, where the work is being done. When this field is selected a list is popped up with the various options like Crossroads, Frontage, Ramp, etc, . The first letter of the option chosen is stored in the field. This is an optional field which can be used by the user. This is a character field of width 1.

* **Comments** : This field is an optional 60 character field which the users can use to write some comments on. When this field is selected a key board is popped up, which can be used to enter the comments.

* **Accomplishment** : This field is a numeric field of width 7. This is a required field. user to

The various buttons found in the form with their respective functions are listed below.

* **LABOR FORM** : This button is used to go to the labor form for a particular activity. There exists a labor form for every activity entered in the crew work report form.

* **EQUIPMENT FORM** : This button is used to go to the equipment form for a particular activity. There exists a equipment form for every activity defined in the crew work report form.

* **MATERIAL FORM** : This button is used to go to the material form for a particular activity. There exists a material form for every activity defined in the crew work report form.

* **MAP FORM** : This button is used to go to the map form. Before using this button the beginning mile post has to be entered because the map form is opened with the map of the tenth mile specified in the beginning mile post. The map set which appear is related to activities elected. (For example: Tree activities - Tree maps)

* **NEXT** : This button is used to go to the next activity for the day. This button acts in a circular fashion, i.e once the last activity is reached the next activity selected will be the first one.

* **PREV.** : This button is used to go to the previous activity. Using this and the NEXT button one can browse through all the activities for the day.

* **EMERGENCY** : This button is used to create a new crew work report form in case of an

emergency in the field. This basically brings up the crew work report form with all the fields blanked except the DATE which contains the current date.

* **DELETE** : This button is used to delete fields in the form. The button works in the following manner. After pressing the button, if the pen is clicked on any field that field is deleted and the field is blanked. If another field has to be deleted the same operation has to be repeated.

* **KEYBOARD** : This button is used as an extra option. Whenever this button is used, if the pen is clicked on any field a keyboard pops up instead of the usual pop-up list. This is just used for user convenience.

* **EXIT** : This button is used to quit the ADOT program. The various forms are saved and the relevant information is stored in a transaction file. If any of the crew work report forms are not completed, i.e any required fields are not entered, then a warning message pops up informing the user that a particular form is not completed, the user has the option of completing the form or quitting without saving. If the program is exited without saving that particular activity and its corresponding labor, equipment and material details will be lost.

* **ENTER** : This button is used after a choice has been made from the pop up menus to enter the value into the respective field.

LABOR FORM :

The various fields used in the labor form and the way they are used is defined below :

* **Employee Code** : This field holds the employee code for each employee for a particular activity. When this field is selected a list of employee codes belonging to the specified ORG pops up. There are 10 such fields in the form making it possible to enter a maximum of 10 employee records for a particular activity.

* **Regular Hours (RT)** : This field holds the number of hours an employee has worked. This is a numeric field of width 4, and is a required field to complete the employee record. When this field is selected a list of values ranging from 0.0 to 10.0 in steps of 0.5, is popped up.

* **Over time (OT)** : This field holds the number of extra hours an employee has worked. This is also a numeric field of width 4, but it is an optional field. When this field is selected a list of values ranging from 0.0 to 10.0 in steps of 0.5, is popped up.

* **Comp time (CT)** : This field holds the comp time for an employee. It is an optional numeric field of width 4. When this field is selected a list of values ranging from 0.0 to 10.0 in steps of 0.5, is popped up.

* **Traffic time (TRF)** : This field holds the number of hours the employee has spent on traffic duties. This is also an optional numeric field of width 4. When this field is selected a list of values ranging from 0.0 to 10.0 in steps of 0.5, is popped up.

* **Travel time (TTV)** : This field holds the number of hours the employee spent travelling. This is again an optional numeric field of width 4. When this field is selected a list of values ranging from 0.0 to 10.0 in steps of 0.5, is popped up.

* **Training time (TRN)** : This field holds the number of hours the employee spent training. This is also an optional numeric field of width 4. When this field is selected a list of values ranging from 0.0 to 10.0 in steps of 0.5, is popped up.

The above fields can be entered only from the top. An employee record has to be completed before a new employee record can be started.

There are some fields in the form which cannot be selected, but display useful information. These fields are :

* Six fields which display the total number of hours for all the employees in each of the above mentioned categories.

* Fields which display the current activity number and description. This is added for user convenience.

Some of the buttons used in the labor form are :

* **DELETE** : This button is basically used for deleting fields from the form. Whenever a field is to be deleted, this button is pressed and the pen is clicked on the field that has to be deleted. This operation is similar to the delete button in the crew work report form.

* **KEYBOARD** : This button is used to pop up a keyboard when a field is selected instead of the pop up list. To achieve this the keyboard button is pressed and then a particular field is clicked on and a pop-up keyboard pops up. This operation is similar to the way keyboard button is used in crew work report form.

* **RETURN** : This button is used to return to the crew work report form which initiated this form. If there are employee records that are not completed a warning message pops up. The user can either complete the record or quit the form in which case the incomplete employee record is discarded.

* **ENTER** : This button is used to enter the selected option from a pop up list into the corresponding field. The operation of this button is similar to the way the enter button works on the crew work report form.

EQUIPMENT FORM :

The fields used in the equipment form are defined as follows :

* **Unit Number** : This field stores the identification number of an equipment. When this field is selected a list of the various equipments used by the ORG pops up. The pop up list contains the identification code and also a description of the type of equipment. This is a character field of width 10. This is a required field.

* **Job Hours** : This field holds the number of hours corresponding to an equipment. This is a required numeric field of width 4. When this field is selected a list of values ranging from 0.0

to 10.0 in steps of 0.5, is popped up.

* **Start Mileage** : This field gives the starting mileage on an equipment when the activity was started. This is an optional numeric field of width 8. When this field is selected a pop-up keyboard pops up.

* **Ending Mileage** : This field gives the ending mileage of the equipment used, at the end of the day. This is an optional numeric field of width 8. When this field is selected the pop up keyboard pops up.

Just like the labor form , the fields have to be added from the top and a new record can be added only after completing the previous record.

Some of the buttons used in the form are

* **DELETE** : This button functions in the same manner as the delete button in labor form.

* **KEYBOARD** : This button functions in the same manner as the keyboard button in labor form.

* **RETURN** : This button is used to return to the crew work report form, which initiated the equipment form. If an equipment record is not completed then a warning message comes up. The user can either return to complete the record or quit to exit the form in which case the incomplete record will be deleted.

* **ENTER** : This button functions in the same manner as the Enter button in the labor form.

MATERIAL FORM : Some of the fields used in the material form are :

* **Location (Loc)** : This is a character field of width 1. This is an optional field. When the field is selected the pop-up keyboard pops up.

* **Code & Description & Unit** : These three fields work in coordination. Whenever the description field is selected a list containing the description, codes and units of materials corresponding to the activity pops up. For example if the activity is a tree activity, then all the materials corresponding to trees pops up with the rest of the materials under the OTHER MATERIALS label. If the Other materials is selected then another list pops up with the rest of the materials. The Code and Unit fields can be selected individually in which case a pop -up keyboard pops up.

* **Quantity** : This is a numeric field which is required for the material record. When selected a pop-up calculator pad pops up.

* **Cost** : This field is also a required numeric field of width 6. When selected a pop-up calculator pad pops up.

* **MUTCD** : This field is a character field of width 3. This is an optional field, which when selected pops up a keyboard.

* **Height** : This is an optional numeric field of width 2. It uses the pop-up calculator for entering values.

* **Width** : This is an optional numeric field of width 2. It uses the pop-up calculator pad for entering values.

* **K** : This is another optional character field of width 1. It uses the pop-up keyboard for entering values. Just like the labor form , the fields have to be added from the top and a new record can be added only after completing the previous record.

Some of the buttons used in the form are

* **DELETE** : This button functions in the same manner as the delete button in labor form.

* **KEYBOARD** : This button functions in the same manner as the keyboard button in labor form.

* **RETURN** : This button is used to return to the crew work report form which initiated the material form. If a material record is not completed then a warning message comes up. The user can either return to complete the record or quit to exit the form in which case the incomplete record will be deleted.

* **ENTER** : This button functions in the same manner as the Enter button in the labor form.

MAP FORM :

Map form, shows the map corresponding to the beginning tenth mile and the activity specified in the crew work report form. Depending upon the type of activity, map forms can be classified into three major types

- **Tree maps** : consists of maps with planting beds which contain trees. All the activities related to trees belong to this category.

- **Shrub maps** : shows maps with planting beds which contain shrubs. These maps also show the various regions on the map containing Granite mulches. All other activities belong to this category except irrigation and tree activities.

- **Irrigation maps** : shows irrigation appliances and irrigation lines. All irrigation activities belong to this category.

All the maps mentioned above show the right of way, the medians, the driving lanes, walls/fences, etc.,. The maps also show the tenth mile boundaries. The active portion of the map lies in between the tenth mile boundaries. Some of the tenth mile maps which display a intersection are divided into 2 sections North and South or East and West, this was done because all the information could not be accommodated in one map. These maps are named in the following manner:

Each tenth mile map is identified by the tenth mile number, the type of activity and section of the tenth mile (N or S) if it is divided into sections. The structure of the map name is as follows 5 characters representing the tenth mile + 1 character representing the activity + 1 character representing the section if it exists. For example the name of the map file for the tenth mile 5.6 for an irrigation activity can be written as 005_6I, if the tenth mile was sectioned into North and South parts then the name could be written as 005_6IN or 005_6IS or, if it was sectioned into East and West parts it could be named as 005_6IE and 005_6IW.

The way the map form tackles each one of the above categories of maps varies. A general idea of how the map form works is given initially and then the different categories are considered.

The Map form contains the following buttons-

- * **MAPS** : This button is used to select a map for a particular tenth mile. Once this button is pressed a list is popped up with the list of map file names in the range defined by Beginning mile post and Ending mile post. The maps in the list belongs to any one of the categories described above.

- * **SELECT/WRITE** : This is a button which toggles from select to write and from write to select. The purpose of the button under the two modes is

- **SELECT** In this mode the various polygons on the map which are marked by a dash can be selected to find out what they contain.
- **WRITE** In this mode the pen can be used to write anything on the maps. In this mode the polygons cannot be selected.

* **SAVE** : This button is used to save the map files after something is written on it. The maps are written with the same name but with a 'w' added at the end of the name. For example in the above example we could save a map with the name 005_6TW.

* **ALL** : This button is used to select all the planting beds in a map. If the save option is selected all the planting beds or irrigation appliances are selected and stored for later use.

* **ENTER** : This button is used after a selection is made on any of the items popped by a list. For example when the MAP button is used a list pops up showing the various map names. Then a particular map name is selected using the ENTER button.

* **+** : This button is used to go forward numerically to the next tenth mile.

* **-** : This button is used to go backward to the previous tenth mile.
Using the above two buttons the whole highway can be traversed.

* **N** : This button becomes active only when a tenth mile map has been sectioned into North and South parts. This button can be used to bring up the North section of the tenth mile. By default when a tenth mile is brought up, it is the North map file.

* **S** : This button becomes active only when a tenth mile map has been sectioned into North and South parts. This button can be used to bring up the South section of the tenth mile.

* **E** : This button becomes active only when a tenth mile map has been sectioned into East and West parts. This button can be used to bring up the East section of the tenth mile. By default when a tenth mile is brought up, it will be the East map file.

* **W** : This button becomes active only when a tenth mile map has been sectioned into East and West parts. This button can be used to bring up the West section of the tenth mile.

Tree Maps : The way the map form tackles the three activities concerning trees are as follows:

- **311 Trim Trees** When this activity is being performed, the user can select any of the marked planting beds. Once selected the common name of the trees found in the planting bed is displayed. The user can either save the name or return without saving. The name if saved is stored in a file for later use. This above operation actually indicates that the activity 311 was performed on all those planting beds the user saved.

- **314 Replace Trees** When this activity is being performed, the user can select any of the marked planting beds. As in the previous case once a planting bed is selected the common name of the trees present in that planting bed is displayed. If the user saves the name, a list pops up on the map, displaying various tree sizes. After selecting a option the user can use the ENTER button to record the selected option. After the size is selected the user has to enter the number of trees replaced, by clicking on the number field which is present on the top right corner of the map form. The user is not allowed to perform any other operation till the number field is entered. All the above information is recorded for later use.

- **315 Remove Trees** As in the previous cases any of the planting beds marked in the map can be selected. If the user saves the name of the tree, then a list pops up displaying a list of possible causes for the removal of the tree. The user can select a option and use the ENTER button to record the selected option. After the cause has been selected the user has to enter the number of trees removed in a planting bed by clicking on the number field as explained in the previous case. The user is not allowed to perform any operation till the number field is entered.

Shrub maps : The way the map form tackles the three activities concerning shrubs are as follows:

In case of shrub maps two things are displayed

Planting beds

Granite mulch

In all the three activities presented below both of the above mentioned regions can be selected. The three activities vary in the way the planting beds are treated. But all of them handle the granite mulch regions in the same manner. When the user selects a granite mulch region the type of the granite mulch is popped up. Whenever a user saves a granite mulch region the information is recorded for later use.

- **321 Trim shrubs / ground covers** This activity is similar to the Trim Trees activity.

- **323 Replace shrubs / ground covers** This activity is similar to the Replace Trees activity.

- **324 Remove shrubs / ground covers** This activity is similar to the Remove Trees activity.

Irrigation Maps: There are four major activities supported by map forms for the irrigation maps. The way these maps are handled are as follows:

The various irrigation appliances and irrigation lines that are marked on the screen can be selected. If a irrigation appliance is selected the name of the irrigation appliance is displayed. If an irrigation line is selected a pop up saying that it is a irrigation line pops up. All the marked regions on the map can be selected using any of the four activities mentioned below, But the way they handle each region varies from activity to activity.

- **331 Irrigation Inspection Major** In this activity the user can select any marked region on the map. The irrigation appliance or line can be saved for future use. There are no pop ups when this

activity is handled.

- **332 Minor Irrigation Inspection/Repair** In this activity the map form handles the irrigation lines and irrigation appliances in different ways. When a Irrigation line is saved the map form records that information. Whereas if a irrigation appliance is selected and saved, a list is popped up showing the various brand names for that particular appliance, the user can select a brand name by using the ENTER button, this selection basically specifies the brand name of the appliance that was replaced. A message pops up asking whether the particular activity is a repair or a replace activity. If it is a replace activity the list of brand names pops up again. Once the user selects a brand name, this specifies the brand name of the appliance that replaced the previous brand, all this information is recorded for later use. There is another option provided for the users in the map forms. If a particular brand name is not in the list popped up , the users can click on the MODEL NO. field to get a pop-up keyboard, so that they can enter the brand name.

- **333 Major Irrigation Appliance Repair/Replace** This activity handles the irrigation maps in the same way as activity 332.

- **334 Major Irrigation Line Repair** When a Irrigation line is selected and saved a list pops up with the various repair activities on a irrigation line, after a user selects one the information is recorded. In this activity the irrigation appliances can be selected for viewing but they won't be saved.

GIS MENUING SYSTEM FOR THE PIMa PROJECT

How to Start GIS System

To initiate the PIMa program type **PIMA** at the C:\ prompt.

The Main Menu

The menu system for PIMa is designed to be user friendly and almost entirely mouse driven. Once past the initial PIMa screen, the following menu appears:

SELECT AN OPTION:		
dBASE	GRAPHICS	EXIT

This allows the user to decide to use the DBASE or ARC/INFO portions of the program, or to exit the program entirely.

This documentation deals with the graphics portion of that menu.

Upon choosing the GRAPHICS option of the initial menu, a second option appears:

SELECT FROM THE FOLLOWING:

<u>LOCATION</u>	<u>INVENTORY</u>	<u>MAINTENANCE</u>	<u>DATABASE FILES</u>	
MILEPOST ROUTE INTERSECT	TREES SHRUBS GROUND APPLIANCES LINES_IRRIG	VEGETATION SURFACE IRRIGATION	RESULT_QUERY DATAFILE	
HIDE_MENU	ZOOM	KEYBOARD	DBASE	QUIT

This menu is divided into five major sections: location, inventory, maintenance, database files and utility.

LOCATION MENU:

The first section deals with location and is highlighted in the following menu :

SELECT FROM THE FOLLOWING:

<u>LOCATION</u> MILEPOST ROUTE INTERSECT	<u>INVENTORY</u> TREES SHRUBS GROUND APPLIANCES LINES_IRRIG	<u>MAINTENANCE</u> VEGETATION SURFACE IRRIGATION	<u>DATABASE FILES</u> RESULT_QUERY DATAFILE	
HIDE_MENU	ZOOM	KEYBOARD	DBASE	QUIT

Location deals with the area of the freeway that is desired for viewing.
The first selection should be route.

<u>LOCATION</u> MILEPOST ROUTE INTERSECT	<u>INVENTORY</u> TREES SHRUBS GROUND APPLIANCES LINES_IRRIG	<u>MAINTENANCE</u> VEGETATION SURFACE IRRIGATION	<u>DATABASE FILES</u> RESULT_QUERY DATAFILE
---	--	---	---

The desired route can be highlighted and selected with the mouse.

SELECT THE DESIRED ROUTE:

AGUA FRIA (LOOP 101)
BLACK CANYON (I-17 NORTH)
E. PAPAGO (LOOP 202)
HOHOKAM EXPRESSWAY (SH 143)
MARICOPA FROM I-17 SOUTH TO SUPERSTITION
PAPAGO (I-10 WEST)
PIMA I-10 SOUTH OF SUPERSTITION
SQUAW PEAK (SH 51)
SUPERSTITION (SH 380)

CANCEL

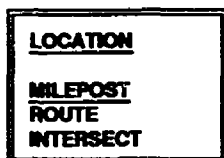

This menu has been designed for the complete implementation of the freeway system. If a route is selected which has not been implemented yet, the following will appear:

THE SELECTED ROADWAY HAS NOT BEEN IMPLEMENTED YET

OK

To go back to the starting menu, highlight and click on the OK.

For the implementation phase, Superstition is the only route that has been implemented at this time. May 1993, the second option under this section of the menu deals with either intersection or milepost increments. Intersections are usually one mile in length, and will display only the baselines in that section of roadway. This part of the menu is ideally to be used for query purposes and not for individual bed or irrigation appliance identification. The milepost option allows the user to select any tenth mile or consecutive tenth mile sections along the selected freeway route.

Highlight and click on the milepost to have the option menu displayed

SELECT THE MILEPOST LOCATION:

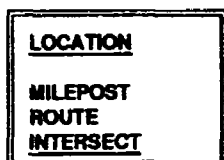

FROM :
TO :

CANCEL OK

Type in the milepost that is desired for viewing. For example, The implementation area is mp 5.4 to mp 12.4 along the Superstition Freeway. By typing in FROM : 6.8 TO: 7.2 , four tenths of a mile will be displayed on the screen. Note: Make sure the mileposts are typed in ascending order for the program to work properly!

If an entire freeway section is desired for viewing, select the intersect option of the menu. This gives the freeway sections between major intersections, usually in one mile increments. Due to the length of the section the size of the individual polygons will be extremely small and hard to distinguish at this scale. The time to regenerate each of the polygons would slow the system, and tend to irritate the operator of the system. Therefore, only the base lines of the roadway section are displayed. These sections are recommended for queries rather than for identification purposes.

The following is the sample of intersection sections available for viewing.

SELECT THE DESIRED FREEWAY SECTION:

- 1 FROM DOBSON ROAD TO ALMA SCHOOL
- 2 FROM ALMA SCHOOL TO ST. HWY 87
- 3 FROM ST.HWY 87 TO MESA DRIVE
- 4 FROM MESA DRIVE TO STAPLEY DRIVE
- 5 FROM STAPLEY DRIVE TO GILBERT
- 6 FROM GILBERT TO LINDSAY
- 7 FROM LINDSAY TO VAL VISTA

CANCEL

INVENTORY MENU:

The second major section of the main menu deals with the inventory along the roadway. This section includes trees, shrubs, groundcover, irrigation appliances and irrigation lines. Sections of this portion work differently depending upon the type of inventory.

SELECT FROM THE FOLLOWING:

LOCATION

**MILEPOST
ROUTE
INTERSECT**

INVENTORY

**TREES

DATAFILE**

HIDE_MENU

ZOOM

KEYBOARD

DBASE

QUIT

The first option in the menu is trees.

<u>INVENTORY</u>
TREES
SHRUBS
GROUND
APPLIANCES
INES_IRRIG

By highlighting and clicking on trees, the first sub-menu appears:

SELECT:

- 1 Identify a particular polygon
- 2 Identify all of a particular species in the viewing area
- 3 Form a specific query

CANCEL

If option "1" is chosen a cursor appears in the viewing screen and by using the mouse to place the cursor in the desired tree polygon; those appearing with white cross-hatching and outlined in white, information about that particular bed will be displayed. The particular pattern for the tree polygons was selected to allow the user to visualize the area or plantings under the tree canopy. After identifying the contents of the desired bed, another question is asked.

WOULD YOU LIKE TO KNOW MORE ABOUT THIS POLYGON?

NO YES

If no more information is desired, click on **no**. However, if more information about the polygon itself, or the plant type in the polygon, click on **yes** and the technical data about the plants contained in a data dictionary will be displayed.

If selecting option "2", identifying all of a particular species in the viewing area, the following list is displayed:

SELECT THE TREE ID YOU WANT TO IDENTIFY

ACFA	SWEET ACACIA
ACSA1	WEeping WATTLE
ACSA2	WATTLE TREE
ACSH	TWISTED ACACIA
ACSM	SOUTHWESTERN SWEET ACACIA
ACST	SHOESTRING ACACIA
CEFL	BLUE PALO VERDE
CEPR	PALO BREA / SONORAN PALO VERDE
CHLI	DESERT WILLOW
DOUNC	CAT'S CLAW
EUMI	COOLBAH TREE 'SNOW QUEEN'
FRVE	FANTEX ASH
GLTR	THORNLESS HONEYLOCUST
MENE	WESTERN TEA MYRTLE
PAAC	MEXICAN PALO VERDE JERUSALEM THORN
PIHA	ALEPPO PINE
POPU	
PRAL	ARGENTINE MESQUITE
PRCH	CHILEAN MESQUITE
RHLA	AFRICAN SUMAC
VACA	ARIZONA ROSEWOOD
WARO	MEXICAN FAN PALM

By highlighting one of the names in the list, the computer will search the database and then give the user the option to highlight the results with the following:

SELECT THE COLOR NUMBER TO REPRESENT THE SELECTED ITEMS:

1 WHITE	2 RED	3 GREEN	4 BLUE	5 YELLOW
6 CYAN	7 MAGENTA	8 DK GRAY	9 LT GRAY	10 LT RED
11 LT GREEN	12 LT BLUE	13 LT YELLOW	14 LT CYAN	15 LT MAGENTA
66 RED HAT	68 BLUE HAT	53 WHITE SQ	55 GREEN SQ	44 BLUE DIAG

CANCEL

The user then has the option to highlight a color or colored pattern to signify the selected polygons. If no polygons were selected, or accenting is not desired, highlight cancel and proceed.

Option "3" allows the user to formulate single or multiple queries on the displayed data. The type of query option is first choice given.

SELECT THE TYPE OF QUERY:

SINGLE MULTIPLE CANCEL

After this option is made, then the following possible query areas are given. Queries involve only quantity, face or planting date. Size of plant is a possible option, however no data is present for the implementation phase.

SELECT AN ITEM FROM THE FOLLOWING:

#QUAN #FACE #PLANTED

Select one of the three choices

Select the logical operator:

= > < GE LE

Select a logical operator. If working with face or planting date, be sure to use the "=" option. After selecting the desired operation, a list of possibilities for values appears.

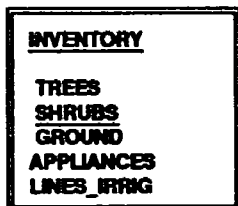

ENTER A VALUE FOR THE ITEM:

QUAN	FACE	PLANTED	SIZEPLANTE
10	NORTH	1/89	1GAL
20	SOUTH	8/89	5GAL
30	EAST	1/91	10FT
50	WEST		15FT
100	NONE		20FT
200			25FT
300			30FT
400			35FT
500			40FT
	CANCEL		45FT

By selecting a value, the program will then search the database for items which correspond to the desired values and will then allow the user to highlight the selected polygons in the desired pattern or shade.

The same series of choices is used for a multiple query. The options rotate through the menu twice and then the database is searched for occurrences which are true for both requirements.

The same series of choices is used for a multiple query. The options rotate through the menu twice and then the database is searched for occurrences which are true for both requirements.

The shrub section of the menu operates exactly the same as the tree section. The user can identify a single polygon, multiple polygons, or query the shrub polygons in the displayed section. Shrub polygons can be identified by the green areas outlined in lighter green on the display screen. The menu for shrub selection contains the following for the implementation area:

SELECT THE ID FOR THE SHRUB YOU WANT TO IDENTIFY

```

ACON
ACRE  SPRAWLING WATTLE
BASA  DESERT BROOM
CAAR  FEATHERY CASSIA / WORMWOOD SENNA
CANE  TREADLEAF CASSIA
CAPH  SILVERLEAF CASSIA
CAPU  RED BIRD OF PARADISE
DAGR  TRAILING INDIGO BUSH
HEPA  RED YUCCA
JUCA  CHUPAROSA
MYPA  SANDALWOOD
NEOL  OLEANDER
NEOL  LITTLE RED OLEANDER
NEOLR 'Mrs. Roeding'
NEOLW WHITE OLEANDER
POPU
RUPE  ruellia peninsularis
TEST  YELLOW BELLS
YUAL  SPANISH BAYONET
  
```

The third section under the inventory menu deals with groundcover.

This is simply an identify operation where a ground polygon, which is displayed as a red hatched pattern on the screen, can be selected. The type of groundcover in that polygon will then be identified.

The fourth and fifth options under the inventory menu deal with irrigation appliances and irrigation lines. Irrigation lines and appliances are drawn only when the irrigation section of the menu is selected. Irrigation appliances are identified by color and shape, Irrigation lines are drawn in two different colors. All lines 1 inch and smaller appear in dark blue and lines greater than one inch appear in a lighter shades of blue. This portion of the menu has three options, either identify a single polygon or line, query for all of a particular type of appliance or size of line in the viewing screen, or cancel.

To identify a single polygon, move the cursor over the desired polygon and click. The id for the appliance will be displayed in the dialogue portion of the screen. If the user desires to find all of a particular type of appliance in the viewing area then the following choices appear:

SELECT THE TYPE OF APPLIANCE

GV	GATE VALVE
RCV	REMOTE CONTROL VALVE
BP	BACKFLOW PREVENTION
WM	WATER METER
FU	FILTER UNIT
PRR	PRESSURE REDUCTION RISER
ARC	ANTENNA / RADIO COMMUNICATION
QC	QUICK COUPLE
PPS	POP-UP SPRINKLER
BS	BOOSTER STATION
FI	FERTILIZER INJECTOR

CANCEL

By selecting one of the above choices, those appliances in the viewing area will be selected, and the user can highlight the appliances in the desired color. It is suggested to use yellow or a vibrant color to allow the user to find the selected polygons.

The following options are available for highlighting the various different line sizes:

SELECT THE DESIRED LINESIZE

10IN
11IN
1IN
2IN
21IN
3IN
4IN
CANCEL

Again it is desirable to use a vibrant color such as yellow to identify the selected lines.

MAINTENANCE MENU:

The third major section of the main menu deals with maintenance.

SELECT FROM THE FOLLOWING:

<u>LOCATION</u>	<u>INVENTORY</u>	<u>MAINTENANCE</u>	<u>DATABASE FILES</u>
MILEPOST	TREES	VEGETATION	RESULT_QUERY
ROUTE	SHRUBS	SURFACE	DATAFILE
INTERSECT	GROUND	IRRIGATION	
	APPLIANCES		
	LINEB_IRRIG		
HIDE_MENU	ZOOM	KEYBOARD	DBASE
			QUIT

This section was originally designed for queries by the user if the system did not have the full capabilities of dBASE. The queries work well, but their scope is limited and the queries are very slow. All three subsections are essentially the same, only the activity code choices vary for the different sections of the menu. The first option deals with vegetation, and one must choose the option between trees or shrubs. All other queries are the same.

HIDE_MENU	ZOOM	KEYBOARD	DBASE
			QUIT

Queries formed in dBASE are contained in a special subdirectory so they can be displayed in while in the graphics portion of the program.

<u>DATABASE FILES</u>
<u>RESULT QUERY</u>
<u>DATAFILE</u>

If the result of a query option is selected, a list of the available query files is displayed on the screen. There will also be some magenta type displayed on the screen. Do not worry about this. It is the result of some background operations within the program. There is no way at present to keep this from being displayed.

Fill in the blank with the name of the desired query file, and press return. Next highlight the field on which the query was designed,

TYPE THE DATA BASE QUERY FILE YOU
WANT TO SEE GRAPHICALLY DISPLAYED

FILENAME :

SELECT THE FIELD:

TREES SHRUBS IRRIGATION SURFACE

CANCEL

or cancel if no file is desired. The program will then display only the area within the limits of the query.

At times the contents of a database file are necessary to understand the available data, or to form a relational join. The next section allows the user to list the contents of a database file.

<u>DATABASE FILES</u>
<u>RESULT QUERY</u>
<u>DATAFILE</u>

TYPE THE FILE TO LIST :
OK CANCEL

If the datafile option is highlighted, the available datafiles are listed on the screen, and the desired file can be typed in for a listing. The files listed are the coverages contained in the program.

UTILITIES MENU:

The fifth and final section of the main menu is the utility section.

SELECT FROM THE FOLLOWING:

<u>LOCATION</u>	<u>INVENTORY</u>	<u>MAINTENANCE</u>	<u>DATABASE FILES</u>
MILEPOST	TREES	VEGETATION	RESULT_QUERY
ROUTE	SHRUBS	SURFACE	DATAFILE
INTERSECT	GROUND	IRRIGATION	
	APPLIANCES		
	LINES_IRRIG		

<u>HIDE MENU</u>	<u>ZOOM</u>	<u>KEYBOARD</u>	<u>DBASE</u>	<u>QUIT</u>
------------------	-------------	-----------------	--------------	-------------

UTILITIES

<u>HIDE MENU</u>	ZOOM	KEYBOARD	DBASE	QUIT
------------------	------	----------	-------	------

The first of the utility options hides the menu. As the different screen displays are completed the menu reappears on the screen. To remove this temporarily click on the selection. To restore the screen either press return or click on the return box on the screen.

UTILITIES

HIDE_MENU	<u>ZOOM</u>	KEYBOARD	DBASE	QUIT
-----------	-------------	----------	-------	------

The zoom feature allows the user to zoom in to any area desired on the screen. By placing the cursor on the upper left corner of the desired area and clicking once, then moving the cursor to the lower right corner of the desired area and clicking again, a window is formed. The screen is cleared and only the new area will be redrawn. To zoom out highlight the **milepost** option on the menu and click, then highlight the **ok** under the milepost and click again to return to the original screen.

UTILITIES

HIDE_MENU	ZOOM	<u>KEYBOARD</u>	DBASE	QUIT
-----------	------	-----------------	-------	------

The keyboard command allows the user to input any commands desired from the keyboard rather than from the menuing system. To return to the menu type **&return**.

UTILITIES

HIDE_MENU ZOOM KEYBOARD **DBASE** QUIT

The DBASE option allows the user to leave the graphics portion of the program to formulate queries or other dBASE functions. Click on DBASE and then on DBASE again when the next menu appears. When finished with dbase operations, the program automatically returns to the graphics screen.

UTILITIES

HIDE_MENU ZOOM KEYBOARD DBASE **QUIT**

Highlight and click QUIT when desiring to leave the PIMa system.

GENERAL OVERVIEW- DIGITIZING

Current Drawings

At the date 27th, April 1993 the current drawing and data sets have been completed:

<u>Highway ID</u>	<u>Route</u>	<u>Milepost</u>	<u>Street Names</u>
Superstition	U.S. 60	174.2-184.5	Mill Ave.-Gilbert
Papago	I-10	128.1-149.1	Litchfield-E. Buckeye
Black Canyon	I-17	198.9-212.6	W. Buckeye-Bell Rd.
Maricopa Freeway	I-17	194.6-198.8	S. 24th-W. Buckeye
" "	I-10	149.1-158.9	S. 24th-Warner Rd.
Auqa Fria	101	No Data	

General Guidelines-

Drawing Set- The current drawing set was produce in AutoCadd, Release 10. All drawings cover state maintain vegetation and irrigation in District 1 at the beginning date of contract. The area covered is usually between rights-of-way lines.

When drawing the highway system the following guidelines must be strictly observed. If one guideline is not observed, hours can be spent making corrections in Arc/3.4D. Note: These guidelines apply to AutoCadd, Release 10. If your cadd system is different you will want to test it's portability until Arc/3.4D receives an exchange format which is acceptable.

Drawing Setup- The current drawing set was produced using the ALISS file acquired from photogrammetry and mapping services. The ALISS file is a centerline map file for the entire state of Arizona. The map file contains centerline data for all state roadways, exit ramps and bridges. The entire map file was originally geographically referenced with state plane coordinates.

This map file was then translated to AutoCadd were it was divided into numerous maps. These divided maps covered from intersection to intersection but also included the milepost markers on each side of the intersection and are usually one mile in length. Once created the first job is to divide between milepost into tenth mile increments.

Once the transfer and increments items have been finish the base map material has to digitized into the computer. The base map material is taped up from intersection to intersection then calibrated to match the ALISS centerline file. The calibration of the base map material is not an exact science and requires time and practice to get a match that is acceptable. The first item is to calibrate one bridge intersection to the existing centerline map file and then to digitize the matchlines from that calibration. The main guideline in calibration is the bridge intersection need

to match as close to perfect as possible. Any type of rubber sheeting needs to occur in the half-mile between the intersections. Again there is no given way to calibrate each time you calibrate a new set of drawing the process could change.

Drawing Lines- In AutoCadd the line type to use is call P-LINE or POLYLINE. A polyline is a connected sequence of line segments. In AutoCadd a polyline is treated as a single entity. Note: Do not use the arc command or any types of dashed lines when drawing, Arc/3.4D usually will not recognized these types of line segments.

All polylines must snap to another line or close upon itself, see figure 1.

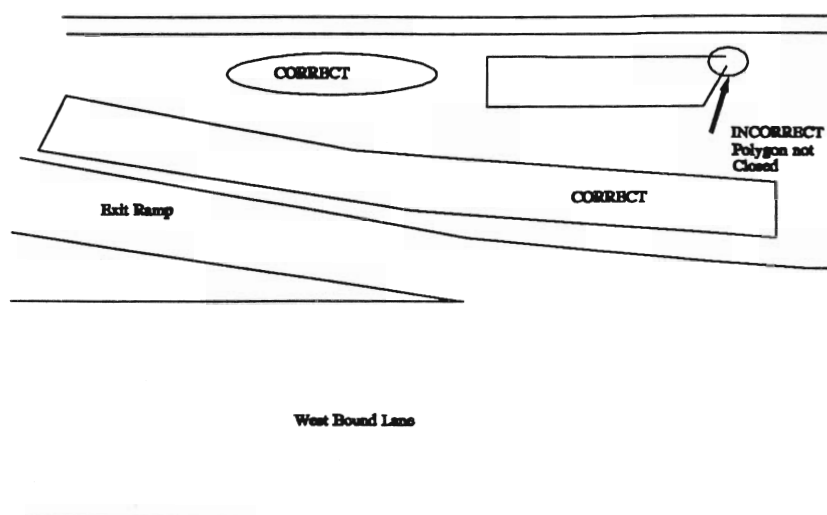

Figure 1. Closing of Polygons

If a line does not end into another line the dangling line segment will create an error box in Arc/3.4D. Another common error which occurs is closing the polygons to late which creates a second polygon, see figure 2. The key guideline to drawing, is every items must close to make a polygon. If the polygons are not closed they will bleed into each other creating either an infinite sized polygon or a polygon with two idcodes.

Idcodes- The idcode system is a simple method used to track all planting beds, irrigation appliances, irrigation lines and surface covers (i.e. bare ground, granite mulches, etc.). The key guideline to placement of idcodes into polygons is the **beginning point has to fall inside of the polygon**. Once the starting point is located within the polygon it can extend outside the polygon without creating any problems. Note: This is true within the autocadd program, test your cadd program to verify.

Another important guideline that must be understood is the tenth mile division of planting beds. If a tenth mile line intersects any planting bed, idcodes must be on both sides of the line. This

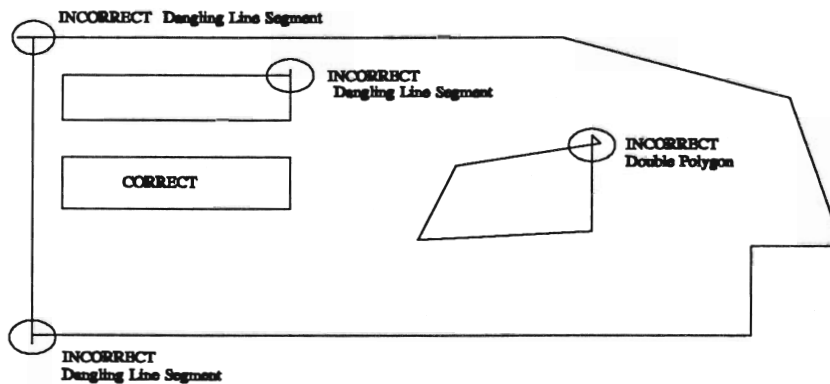

Figure 2. General Polygon Drawing Problems

give the same planting bed two unique idcode labels. When counting the vegetation that belongs with the planting bed it is divide between the two beds.

Figure 3 is a diagram to reference for the idcode system. The first four letters of the system uses the milepost marker which is further divided into tenth mile increments. The fifth and sometimes sixth letters represents the polygon description. The last two or three letters represents a number assign to that polygon. The number 01, restarts at each tenth mile and polygon description type and sequentially advances up to 999 if necessary.

Layers for Drawings

General Overview- All drawing contain layers which can be turn on/off. A layer is similar to a transparent overlay used in drafting. Layers allow you to view and plot related aspects of a drawing separately or in any combination and a color and line type are associated with each layer. Each drawing presently contains approximately thirty two layers. These layers are necessary to cover base plans, vegetation plans, irrigation plans and surface plans. The best method of guaranteeing that these layers will be included into new drawings is to insert a block which contains all the layers into the new drawing.

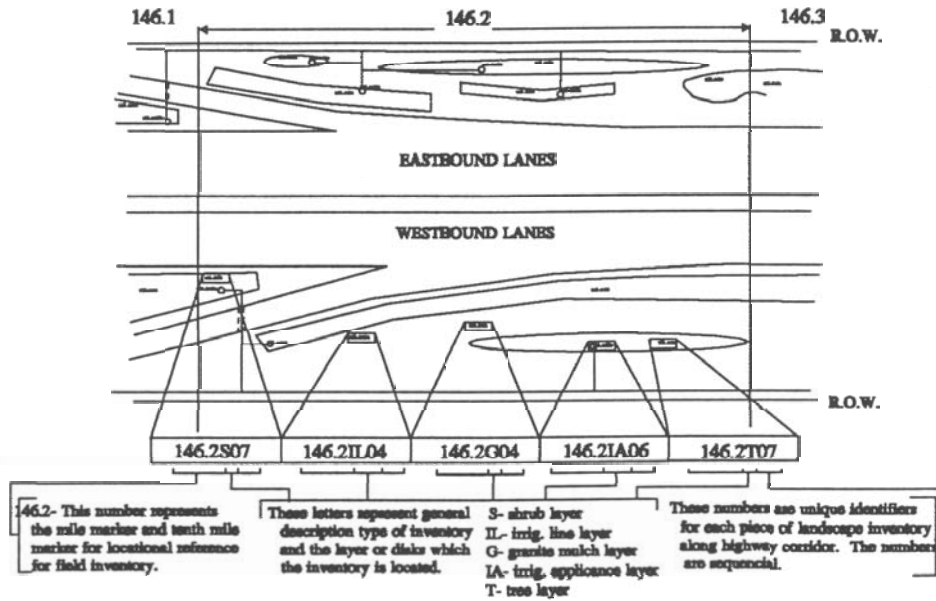

Figure 3. Idcode System

Base Plan Information- The base plan information contains layer information that is used for every plan. These layers are usually hardscape structure such as: pavement edges, walls, etc.. The following are the layers used in the base plan:

Layer	Color	Description
0	White	0 Layer- Necessary for every drawing, even though it contain no information
CL	Magenta	Centerline Layer- contains centerline information received from the ALISS file
ML	Red	Matchline Layer- contains matchline information
10THMM	Yellow	Tenth Mile and One Mile Marker Line Layer- use for 10TH mile increment lines
PE	White	Pavement Edge Layer- delineates the pavement edges for roadway, exit ramps, etc.
ROW	Maroon	Rights-of-Way Layer- delineates the physical boundary to which the state owns
WAL	Grey	Wall Layer- delineates walls and fences within the ROW
BR	Cyan	Bridge Layer- delineates pavement edges of bridges

Vegetation Plan Information- There are only to vegetation layers. These layer are TR- Trees and SH- Shrubs but they are drawn quite different from each other. The difference is when shrubs planting beds are drawn the ends are squared off as much as possible. Tree planting beds when drawn are rounded are the ends. The round end of these tree planting beds is not by using an arc command but drawn using many line segments to create the illusion of an arc. Also to be noted is all idcodes that attached too these planting beds must be in the same layer.

Layer	Color	Description
TR	Yellow	Tree Layer- use to draw tree planting beds
SH	Green	Shrub Layer- use to draw shrub planting beds

Irrigation Plan Information- The irrigation plan information is the most complicated for drawing in AutoCadd. The main reason for this is the number of layers required to make the maps useful in Arc/3.4D. Each type of irrigation appliance is assigned a layer along with the size of irrigation lines. One difference between these maps and the vegetation maps is all the idcodes go into one layer called IATEXT (Irrigation Appliance TEXT). An important concept which needs to be discussed is all irrigation appliances are polygons, the same as a vegetation planting bed. The starting points for idcodes must be inside the irrigation appliance polygon. The symbols for the irrigation appliances are also unique (see Figure) and should be followed to allow easy identification when digitizing.

-  - GV: GATE VALVE
-  - PRR: PRESSURE REDUCTION RISER
-  - RCV: REMOTE CONTROL VALVE
-  - ARC: ANTENNA RADIO CONTROLLER
-  - WM: WATER METER
-  - FC: FIELD CONTROL SATELITE
-  - FS: FLOW SENSOR
-  - BP: BACKFLOW PREVENTER UNIT
-  - QC: QUICK COUPLER
-  - BS: BOOSTER STATION
-  - FU: FILTER UNIT
-  - PPS: POPUP SPRINKLER

Figure 4. Symbols Used for Irrigation Appliances when Digitizing

The following is the layers associated with the irrigation plan:

Layer	Color	Description
GV	Magenta	Gate Valve Layer
RCV	Magenta	Remote Control Layer
BP	Magenta	Backflow Preventer Layer
PRR	Magenta	Pressure Reduction Riser Layer
ARC	Magenta	Antenna Radio Controller Layer
QC	Magenta	Quick Coupler Layer
PPS	Magenta	Pop-up Sprinkler Layer
BS	Magenta	Booster Station Layer
FU	Magenta	Filter Unit Layer
FI	Magenta	Fertilizer Injector Layer
WM	Magenta	Water Meter Layer
1IN	Blue	One Inch Line Layer
1QIN	Blue	One and One Half Inch Line Layer
1HIN	Blue	One and One Quarter Inch Line Layer
2IN	Blue	Two Inch Line Layer
2HIN	Blue	Two and One Half Inch Line Layer
3IN	Blue	Three Inch Line Layer
4IN	Blue	Four Inch Line Layer
5IN	Blue	Five Inch Line Layer
6IN	Blue	Six Inch Line Layer
IATEXT	Magenta	Irrigation Appliance Text Layer
IL	Magenta	Irrigation Line Text Layer

Surface Plan Information- The surface plan information is a detail map of the change of surface covers. Surface covers include grass, granite mulches, decomposed granite mulches, rock mulches, bare ground, etc.. All of these surface covers are within one layer called GM (Granite Mulch). The database files carries the information about the type of surface cover. Another key element is the idcode system used for surface cover. Note: If a planting bed divides the entire tenth mile, then idcodes will need to be setup for both areas of surface cover.

Layer	Color	Description
GM	Blue	Granite Mulch Layer- use to delineate between different areas of surface treatments

File Transfer with DXF

Translating files into the Data eXchange Format (DXF) is required for transfer a file into Arc/3.4D. The following is some general guidelines that need to be followed when translating the files. The size of the map to transfer needs to be limited to the power/speed of the computer system. In the PC 486 computer environment we found that a map file no greater than five miles was reasonable to manage. In the workstation environment a map file of greater size may be acceptable, but five mile increments are easier to handle and view.

When performing the DXF translation it is necessary to explode all entities which are blocks. If a drawing is transfer in without being the blocks being exploded the block will not be able to be viewed. For further information about what to do once the information is received into Arc/3.4D, see chapter on Arc/3.4D.

TECHNICAL DOCUMENTATION FOR THE PIMa PROJECT

The PIMa project brought some challenges with it. The original Centerline data was translated from Intergraph format to workstation ARC/INFO software ported to the Intergraph workstation environment. That was then put in a DXF format and translated into AUTOCAD. From AUTOCAD the drawings were again put into a DXF format and translated into workstation ARC/INFO on the SUN Sparc II platform. After clean and build operations and data attachment was done, the files were then exported into a PC format for use by ADOT.

To be able to have a format acceptable in the PC, the original coordinates were given a -20,000 , -20,000 x,y shift. The PC can accept only seven significant digits with the PC ARC 3.4d program and it was felt that this would position the coordinates in such a way that the PC format would be met. However it was found that the various data translations kept changing the number of digit places and therefore it became necessary to transform the coordinates by a power of 2 to have the files successfully exported to the PC. It was later found that distances were still off by a factor of 10, so another transformation became necessary. The shifted coordinates need to be recalculated by dividing the tics by 1000 (10^3) to have proper distances in the coverages. This is necessary in the implementation phase. This may not be necessary in the later phases depending on the number of translations the data must go through.

It is recommended to break the roadway segments into five mile increments for ease of handling in the PC environment. Coverages greater than five miles tend to fail when given the clean command, or any of the other complex commands for manipulation. Database searches also become slower with longer stretches of roadway.

COVERAGES

The coverages developed for the program are base, which includes all the highway features, shrub, which includes both shrub and groundcover polygons, tree and irrigation. Base is a linear coverage, shrub and tree are polygonal coverages, and irrigation is developed as both polygonal, the appliances, and linear, the lines themselves.

IMPORTING COVERAGES FROM AUTOCAD

The coverages have been digitized into autocad for ease of data input. The coverages must be put into a dxf format to be translated into PC ARC 3.4d. Each of the separate coverages will be formed from separate layers in the autocad file. To get a listing of the coverages, the dxfinfo command must be used.

The following is a listing of the layers used to form the four coverages necessary to form the PIMa project.

The base coverage uses the following layers: 0, centerlines, matchlines, 10th mile markers, pavement edge, right of way, walls and fences and bridges.

The Tree layer uses: 0, trees, 10th mile markers, pavement edge, right of way and bridges.

The shrub layer uses: 0, shrubs, 10th mile markers, pavement edge, right of way, walls, granite mulch and bridges.

The irrigation layer uses: 0, gate valves, remote control valves, backflow preventers, pressure reduction risers, ant. radio control, 1 inch lines, 1 half inch lines, 2 inch lines, 1 quarter inch lines, 2 half inch lines, quick coupler, pop-up sprinkler, booster station, filter unit, fertilizer injector, 10th mile marker, pavement edge, 3 inch lines, 4 inch lines, irrigation line labels, bridges, irrigation text and water meter.

CLEAN

The clean operation is performed on the tree, shrub and irrigation coverages.

BUILD

The build operation is performed on the base and irrigation coverages using the line option.

ATTACHING DATA

The XCODE and ACODE data from the DXF files is attached to the coverages with the joinitem command in arc. This process can be done after the coverages have been cleaned and built. XCODE data attaches to the .PAT files and ACODE data attaches to the .AAT files. the filename_id is the common item on which the files are joined, and it is much faster to use the ordered option.

Data other than the XCODE and ACODE are attached to the coverages with the IDCODE which is unique to each polygon throughout the entire system.

GRID PAD FILES

Transporting the various map files to the Grid Pad involves forming new coverages of each tenth mile for the tree shrub and irrigation coverages. Each of those new coverages must include lines and label points for every polygon. Each must be built as a line file and as a point file. In addition, each .pat and .aat file formed an item "code" must be added. each coverage must be then dumped into a linegrid or pointgrid format for importation into the Grid Pad environment.

To have the maps in a format acceptable to the GRID PAD with intelligence for the necessary operations, the following files must be formed using PC ARC/INFO commands:

.FIX files- These files are a truncated .aat file containing only the filename_id, idcode and appliance type or ID for the irrigation files. These files are formed using the dump command in TABLES. The format for the shrub and tree files is: filename_id, idcode and id. Naming convention is filename.fix.

.PPP files- These files give the XY coordinates of the label point in each polygon. They are created with the ungen command in the ARC module. These files contain only the file_id and the XY coordinates of that id. Naming convention is filename.ppp.

.XY files- These files are formed by using the dump command in TABLES. The .bnd file for each coverage is dumped to a file using the naming convention filename.xy

RASTER files- Raster files are created using the linegrid and pointgrid commands for each coverage. The cell size is 20 x 20 and the resolution is 380 x 528 for the Grid Pad. Each .nas file is then converted into a .pcx file for importation into the Grid Pad.
